Introduction

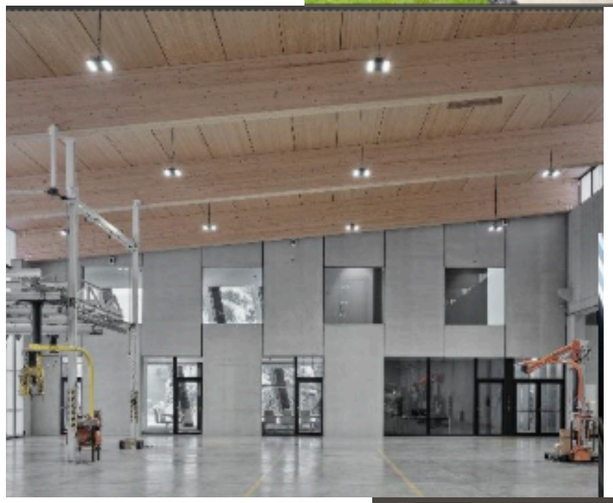

A history of experience and innovation: ATIS was founded in 2006, building on 30 years of experience in the industrial handling sector and driven by a desire to create ever safer and more innovative manipulators.

Specialisation at your service: our high level of specialisation in the industrial handling sector forms the basis of our expertise.

Quality and customer focus: ATIS stands out for the excellence of its products and its constant focus on customer needs and satisfaction.

Our know-how, your solution: thanks to our in-depth knowledge of the sector, we offer bespoke solutions to precisely meet your needs.

ATIS
MANIPOLATORI PNEUMATICI

Mission

We design, manufacture and supply innovative and reliable industrial pneumatic manipulators that significantly improve safety, ergonomics and productivity in our customers' load-handling processes. We provide effective solutions for the safe handling of heavy, bulky, fragile and hazardous loads, as well as for repetitive tasks, preventing damage to products and safeguarding the health of operators.

Vision

To be the go-to partner for companies seeking to optimise their material handling processes, offering high-quality, bespoke pneumatic solutions that deliver real added value. We are committed to translating our customers' needs into greater operational efficiency, a significant reduction in risks, a safer and more ergonomic working environment, and the assurance that the integrity of every load is preserved.

Applications in the defence sector

- **Handling of hazardous or sensitive materials:** in the defence sector, the management of sensitive materials such as ammunition, explosives, chemicals or high-precision electronic components requires solutions that ensure maximum safety and control.

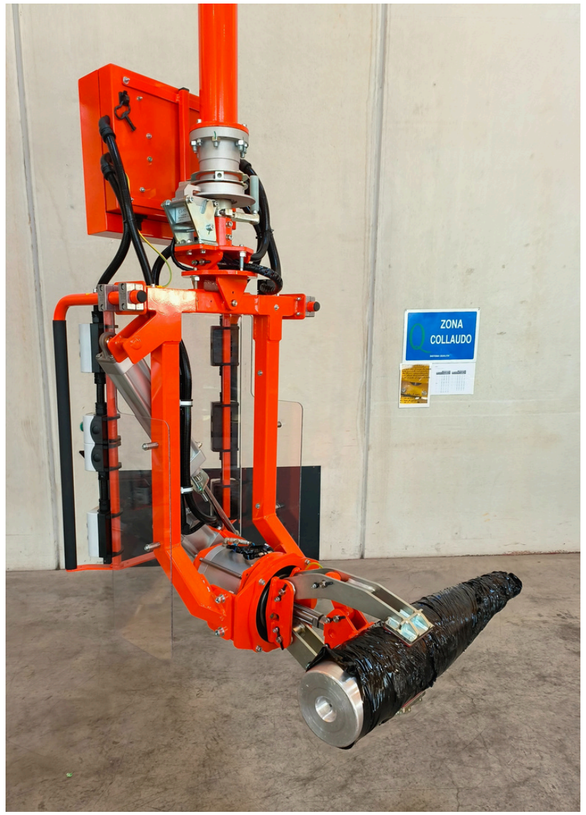

- **Logistics support at bases and warehouses:** military logistics operations are often complex and carried out under less than ideal conditions.

- **Operations in contaminated or high-risk environments:** in settings such as military laboratories, it is essential to work with equipment that minimises direct exposure.

MANIPOLATORI PNEUMATICI

Competitive advantages in the defence sector

- **Operational safety for staff:** pneumatic manipulators reduce operators' direct exposure to hazardous situations.
- **Reduced handling times and costs:** the automation and ergonomic design of the manipulators enable: faster loading/unloading times, reduced staffing requirements for repetitive tasks, and optimisation of logistics flows in warehouses and military bases
- **Reliability even in extreme conditions:** pneumatic manipulators are designed to withstand extreme temperatures, dust, humidity, chemicals and intense mechanical stress.
